

Adjustright®

ADJUSTABLE MEDICATION CART

With a few simple turns of a conveniently located handle the cart can be raised and lowered by 19 centimeters (7.5 inches) - allowing nurses of different heights to work comfortably from the same medication cart.

*Adjustright®
The ergonomically
designed, adjustable
medication delivery cart*

The Adjustright® medication carts give health care workers the ability to adjust the cart to their most comfortable working height. With a few simple turns of a removable handle the carts can be raised and lowered to a maximum of 19 cm (7.5") - from the lowest height of 94 cm (37") to the highest height of 113 cm (44.5"). The lifting mechanism does not require hydraulic fluid therefore eliminating the opportunity for messy and potentially dangerous fluid leaks. The carts come in two sizes with customizable five and ten inch drawer configurations and a wide range of optional colours. All carts are built on a heavy-duty steel frame that is covered with the most durable yet lightweight materials available. The result is an ergonomic, attractive, light weight medication cart solution.
