

Maritime pharmacy – First to enhance patient safety in Canada

January 12, 2010

Manrex Limited is proud to announce that Forest Hill Drug Mart is the first Canadian site to implement the MDMV2.0, Compact Medication Detection Machine developed by Global Factories of Holland.

The MDM is an automation tool designed to aid in the verification process of packaged medications. It is ideal for any hospital or LTC pharmacy utilizing automated packaging machines which produce multidose cellophane pouches. The MDM verifies the contents of each packaged pouch dispensed by these machines in seconds, a task which normally takes hours. Not only does it verify the contents, it digitally stores each pouch image and cuts and winds the pouches per patient.

Forest Hill Drug Mart, which fills prescriptions for residents in the Nova Scotia long term care and community care setting and which has recently expanded its operations into London Ontario with the opening of Precise Pharmacy had no hesitation in adopting this new technology as it became available. “The MDM, which we purchased from Manrex Limited was our next logical step.” states Nathan Hill, owner of Forest Hill Drug Mart. “We believe strongly in pharmacy automation, and we are excited to bring it to both Nova Scotia and Ontario. The opportunity to increase accuracy and professionally document my dispensing process while saving money only makes sense, the move to MDM was one of the quickest decision’s I have ever made.”

“Becoming the first Pharmacy in Canada to take this step solidifies Forest Hill Drug Mart as a true leader in Patient Safety” states Ben Szuuts, Sales Manager for Manrex Limited, the company responsible for the sale of this technology in Canada. “Representing a company that is a true innovator in healthcare comes with its challenges, and finding clients who will take that first step to adopt new technology is often difficult and depends a lot on their perception of your company.” says Szuuts, “Forest Hill Drug Mart stepped up to the plate and hit a home run in the advancement of Canadian Healthcare.”
